Declaration Statement

I am working on a Project titled “**Maximizing profits and expanding into new sources of revenue for a software company**”. I extend my appreciation to BLISS Infotech Pvt Ltd, for providing the necessary resources that enabled me to conduct my project.

I hereby assert that the data presented and assessed in this project report is genuine and precise to the utmost extent of my knowledge and capabilities. The data has been gathered from primary sources and carefully analyzed to assure its reliability.

Additionally, I affirm that all procedures employed for the purpose of data collection and analysis have been duly explained in this report. The outcomes and inferences derived from the data are an accurate depiction of the findings acquired through thorough analytical procedures.

I am dedicated to adhering to the principles of academic honesty and integrity, and I am receptive to any additional examination or validation of the data contained in this project report.

I understand that the execution of this project is intended for individual completion and is not to be undertaken collectively. I thus affirm that I am not engaged in any form of collaboration with other individuals, and that all the work undertaken has been solely conducted by me. In the event that plagiarism is detected in the report at any stage of the project's completion, I am fully aware and prepared to accept disciplinary measures imposed by the relevant authority.

I understand that all recommendations made in this project report are within the context of the academic project taken up towards course fulfillment in the BS Degree Program offered by IIT Madras. The institution does not endorse any of the claims or comments.

1. Executive summary

This report focuses on BLISS Infotech Private Ltd, a company that specializes in making software applications for LIC agents. Their sales network has nearly 40+ channel partners, 75+ dealer and resellers. They are located in New Delhi and earn revenue from both B2B and B2C sources.

The major issue plaguing the business is not being able to reach optimum profits due to dormant and at times fraudulent dealers and also due to pricing wars with their competitors. The second issue the business faces is that of relying heavily on their B2B source of revenue and not putting enough focus on the D2C sector. Also, they have not been able to capitalize in rural India. In my conversation with the company executives, I found out that any issues or feedback related to the app go from the users to the dealer and then to the company and that there is no dedicated support team. This increases the time taken to fix bugs and causes inconvenience to the customer.

A possible approach and solution to these problems lies in analyzing the data regarding their B2B partners and then devising a strategy to pick the right partners and outmaneuvering their competition. Regarding expansion into D2C and rural parts of the country, we will have to analyze their sales data geographically and by type.

The expected outcome will help the company to maximize their profits by virtue of expanding their source of income and by relying on trusted dealers.

2. Organization Background

BLISS Infotech Pvt Ltd is an established & well-known software solution provider in the Insurance & Financial sector. It provides affordable, user friendly and comprehensive software in the form of apps and their website along with new age interactive services for Life Insurance Agents and Development Officers. It was incorporated in 2012 by Devesh Upadhyay and is headquartered in New Delhi. The company has vast experience in making software's related to Life Insurance (LIC) & financial professionals. The company's product line has software applications like LIC Agent Advisor, LIC DO Advisor, LIC CLIA Advisor, LIC Agent Plus, Mobile Advisor, Financial Calculators, LIC ULIP Advisor, LIC Return Calculators, SMS Messenger for LIC professionals. The LIC software provided by them are

trusted and secure, which helps their end consumer (LIC Agents) to stay ahead from other LIC professionals in competition. Their sales network has nearly 40+ channel partners, 75+ dealer and resellers. They have two streams of revenue i.e. their B2B channel where they sell the software to a 'Dealer' for a transfer fee, who then sells it to the end consumer (insurance agents) and a D2C network where the insurance agent buys the software directly from them.

3. Problem Statements

1. Maximizing the profit by streamlining the B2B sales network - By choosing responsible dealers thereby reducing losses through mismanagement by them.
2. Expansion into D2C sector of revenue and in rural areas- The company relies heavily on the B2B sector and should try to diversify its source of income by spending more on marketing and education about the product to the end consumer.
3. Implementing a proper post-deployment support system for the app- For solving issue that may arise in the app, so as to maintain the trust of the dealer and the end consumer.

4. Background of the Problem

1. The primary mode of sales for the business is through dealer networks, who are granted the rights to resell the software for a specified period in exchange for a transfer fee. They, then sell the software to the LIC agents. But on some occasions, they may receive better offers from the competition and in some cases they may (knowingly or otherwise) 'cross-sell'. A cross-selling is when a dealer sells the products to an agent living outside of the dealer's assigned area i.e. another dealer's area. Also, sometimes they may just go dormant without paying the transfer fees to the company.
2. In my conversation with the company owners, I found out that the bulk of the sales is through the B2B platform. In their situation, it would be wise to expand into D2C and rural areas.
3. Also, the company has an app development but they do not have a dedicated support team. So, if any problems were to arise, they go from the customer to the dealer and then to the development team. This increases the time for fixing any issues that may arise.

5. Problem Solving Approach

1. For the B2B sales network-

A. Methods to solve the problem-

a. We can look at the data for the dealers associated with the company and try to find out the renewal rate. With this information, we can look into reasons why the dealers did not renew their contract for selling the software and how can the company get these dormant dealers to work with them again.

b. Find new dealers through seminars and events sanctioned by LIC or organized by the company. We can devise a plan for conducting background checks on these dealers before formulating a deal with them.

B. Data collection and tools to be used-

a. We will need the data for the dealers associated with the company from the past three to four years, along with data regarding any complaints and surveys conducted on the dealers. This data can then be analyzed using **graphs, filters, and aggregate functions** in **Microsoft Excel** and **Google Sheets**, helping us gain valuable insights.

2. For expansion into the D2C sector and rural areas-

A. Methods for solving the problem-

a. We can look at the data regarding the sales done and find out the percentage of the sales done through B2B and D2C and compare them. With this information, we can look into the ways of expanding into D2C, for example- by having a user-friendly website from where the customer can directly buy the app.

b. Regarding the expansion into rural areas, we can look into the sales data and analyze the percentage of sales in urban and rural areas and any data regarding marketing. With this information, we can look into ways of spreading knowledge amongst potential future customers and people who may not know much about life insurance.

B. Data collection and tools to be used-

a. We will need any data regarding the sales done and classify them geographically into rural and urban areas and by stream into D2C and B2B. Also, any data into marketing expenditure will be very useful to gain insights. This will be achieved through **graphs and filters** in **Google Sheets** and **Microsoft Excel**.

3. Regarding having a tech support team-

A. Method to solve the problem-

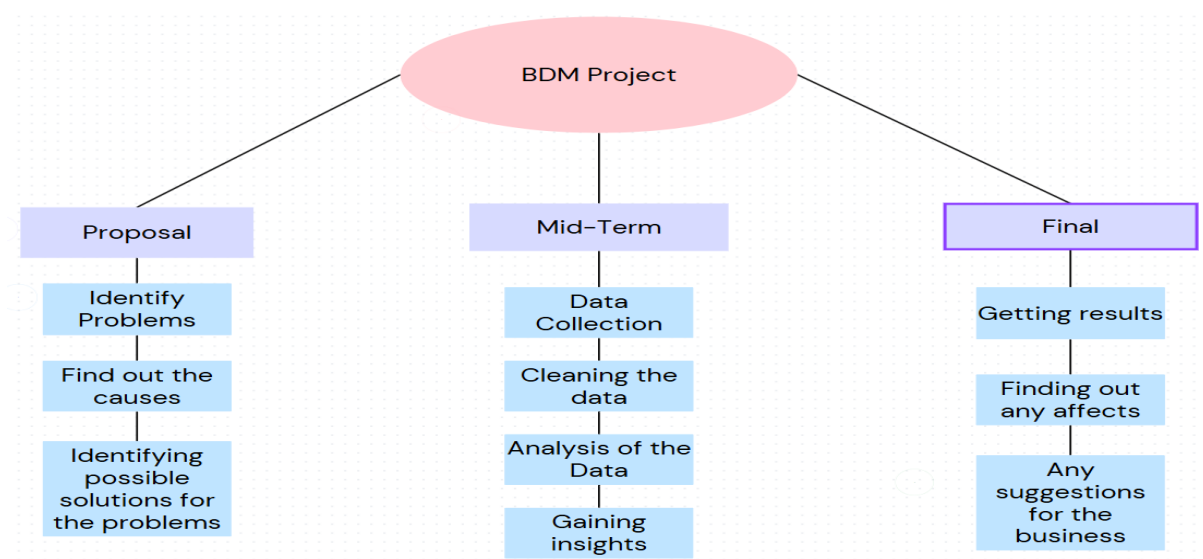

a. We can look into the data regarding the employees and the team that they work in. With this, we can suggest changes to the structure of the teams to accommodate a proper support team.

B. Data collection and tools to be used-

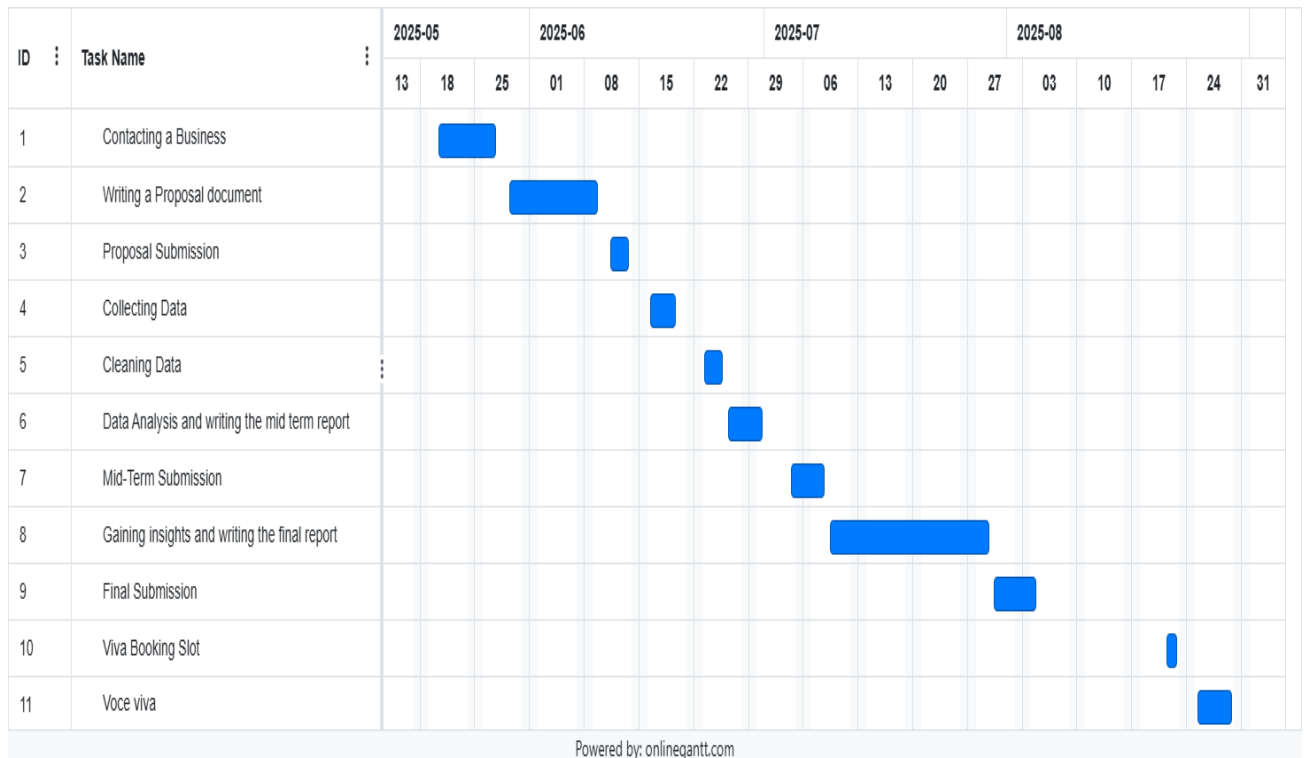

a. We will need the data regarding the employees and the team that they are involved in. This data can then be analyzed to divide work amongst teams to create some space for a dedicated support team. The analysis will be done through **graphs** in **Google Sheets** and **Microsoft Excel**.

6. Expected Timeline

6.1 Work Breakdown Structure

6.2 Gantt chart

7. Expected Outcomes

By the end of this report the expected objectives are-

1. Choosing trustworthy dealers and improving their renewal rate by trying to understand and beat the competition. This will help the company, in its pursuit to achieve higher profits.
2. Learning the problems regarding expansion into rural areas and D2C and trying to introduce steps to overcome them. Also, investing in education of the LIC agents, regarding the product, and enlightening people in rural areas, who may not have much knowledge on life insurance and its importance.
3. Having a dedicated support team, so that the end consumer can directly contact them in case of any trouble and the turnaround time for any bugs or errors can be reduced.
